"MONTHLY SUMMARY"

This is the first issue of the Coin Dealer Newsletter's "MONTHLY SUMMARY and Complete Series Pricing Guide"—an entirely new eight-page publication which will accompany the second CDN issue of each month. It will be mailed to all Newsletter subscribers free of charge during the entire length of their subscription! A considerable amount of effort has gone into the preparation of this new service to CDN subscribers; prices are as accurate as current trading permits and are the result of long hours of research. The CDN staff feels that this effort has been well worth the end product—and entirely new and comprehensive pricing reference designed to aid the collector, investor and dealer in day-to-day trading and investment activities.

Greatly increased market activity now warrants the dealer-to-dealer "bid-ask" price charts for the numerous complete series which appear on pages four through eight. Readers will note a Newsletter "first"—prices for all dates in these various series are reported in all grades from Good thru Ch. BU MS-65. In no other publication can such complete pricing information be found! Most significant are the prices for the AU, MS-60 and MS-65 grades; virtually all other "guides" simply list prices for XF and BU—with nothing in between. Subscribers, of course, are not only aware that there is a major jump in price between the XF and BU grades, but also that the "BU" grade itself, to be meaningful, must be divided into both MS-60 and MS-65 listings. The need for an AU listing has been discussed for a long time by the numismatic community and the difference, of course, between MS-60 uncirculated and choice full strike MS-65 is an extremely important one. Now these difficult to locate prices will be at your fingertips when needed—again the CDN has taken care of the research for you! Price changes in the various series covered are far too frequent for once-a-year pricing information—in effect, this new CDN publication will be a monthly up-date on many important sections of the "Redbook"!

In addition to this regular new extensive series coverage, the CDN plans in future "MONTHLY SUMMARY" issues to cover the earlier series of U.S. coins—1793 through the Seated Liberty series. These further reports will be published as market activity dictates; occasionally additional complete series will be examined and, in other instances, specific groups of dates or "in demand" singles will be spotlighted. In the planning stage, for example, are the latest up-to-date bid-ask prices for such scarce and popular issues as 1879-89 three-cent nickel pieces, the 1879-81 Seated Liberty dimes and the very elusive 1879-90 Seated Liberty quarters and half dollars. Although most teletype bidders simply ask for "quotes" on these tough dates, bid-ask prices are being extracted from hundreds of teletype messages as well as various other buying/selling lists and catalogs in order to give CDN subscribers another accurate pricing reference. It might well be added that in these mentioned groups, as well as in numerous other areas, dealers are often willing to pay as much as "double Redbook" for all grades—and they often offer to pay well over current price listings in many of the "market guides" which are designed to reflect retail price levels!

Another regular monthly feature of our new publication will be "Auction Trends". As always, major auction results are monitored by the CDN staff and this new feature will give us an opportunity to make a more thorough analysis of auction results and their relation to the current market and to dealer buying prices. This month's article covers the very impressive complete date set of Walking Liberty half dollars which was recently auctioned by Paramount International Coin Company; it is very interesting to compare many of the prices realized with today's dealer bids for the same top quality coins. In next month's issue we will discuss many of the highlights of the forthcoming Stacks Auction to be held in conjunction with the 1976 A.N.A. Convention to be held in New York City later this month.

Important trends in teletype trading in material covered by the weekly CDN (commemoratives, BU rolls, silver dollars, proof sets, etc.) will also be discussed at length in this new "MONTHLY SUMMARY". Trading in these areas often tends to be cyclical in nature—the ups, downs and lulls can now be examined more extensively than space in the weekly Newsletter allows. This issue, for instance, gives readers an "inside look" at the current active market in Texas commems—where the buying is occurring and where the coins are going.

We feel that this additional CDN publication will be of enormous benefit to all subscribers and we look forward to publishing this even more comprehensive pricing information each month!

AUCTION TRENDS

On Friday, July 9th, in conjunction with the Metropolitan Washington Coin Convention, Paramount International Coin Corp. auctioned the Elrod collection of uncirculated Walking Liberty half dollars. As the Paramount catalog indicates, the collection was, in their opinion, "the most outstanding to be offered at auction or private sale in decades, if not in all numismatic history". The further opinion that "many records will no doubt fall" during this auction is borne out by some of the very impressive prices realized. Among the highlights:

1916-P, Unc-65+ "A couple of minor marks away from the MS-70 category" - \$425 (current bid \$295).

1916-D, Unc-65+ "identical in quality to the preceding lot" - \$330 (current bid \$270).

1916-S, UNC-65+ "Incredibly well struck for this issue, with nice skirt lines and a full head . . . a small portion of the hand is not totally struck up" - \$675 (current bid \$475—a perennially under-valued issue in top condition.)

1917-S (obv.), Unc-65+ "A magnificent coin . . . for the person who has been waiting for the very best" - \$1250 (current bid \$650—another issue which is worth far more than the present bid level indicates, but, unfortunately fear of counterfeits often deters trading.)

1918-P, Unc-65+ "This beautiful piece would not do injustice to the MS-70 grade . . . incredibly well struck . . ." - \$550 (current bid \$320).

1919-P, Unc-65+ "Kept out of the 70 class only by a small mark on Liberty's face . . . one in the field . . . one or two among the wings" - \$1200 (current bid \$1050).

1919-D, Unc-65 "Outstanding in all respects, save for a scratch on the top of Liberty's head and a tiny planchet defect below the U of TRUST" - \$2800 (current bid \$1700—"usually one of the last pieces to be acquired when building a set . . . probably the most under-rated of all Walking Liberty halves.")

1919-S, Unc-65 "This date usually comes weakly struck. While much above average, this example does have some softness in the centers . . . head and hand about half struck up . . . exceptionally few and trivial handling marks" - \$2200 (current bid \$2150—it would be very interesting indeed to witness the auction of a fully struck MS-65+ specimen!)

1920-D, Unc-65 "The head is almost flat, which is usual for this issue . . . skirt lines and hand are above average" - \$1400 (current bid \$1300—again a rare fully struck example would almost certainly bring close to \$2000.)

1920-S, Unc-65 "above average strike" - \$1250 (current bid \$1250—probably as rare as the 1919-D in strictly full strike condition.)

1921-P, Unc-65 "full head and skirt lines . . . a few light marks along Liberty's left leg" - \$1800 (current bid \$1600—a scarce issue, but one that appears at auction far more often than, say, the 1919-D & S or 1920-D & S.)

1921-D, Unc-65 "Very well struck, with a few marks on Liberty's breast and below the stem of the branch" - \$2200 (current bid \$1800—again, even though this is by far the lowest mintage issue of the series, choice well struck specimens do appear with some frequency; collectors can wait for this one in top condition.)

1921-S, Unc-65 "No 1921-S in existence could have lustre and surfaces superior to this piece . . . not completely struck up although the head of Liberty is the only area of the coin where any details are lacking . . . no significant handling marks of any kind . . . a tiny rim nick just following the last A of AMERICA" - \$9500 (current bid \$7500—not a single choice example has been offered to teletype bidders since the bid level was \$3500; a true rarity in top condition.)

(continued on page two)

"MS-65" VS "GEM"

WHAT TO EXPECT—AND NOT TO EXPECT— FROM THE MS-65 GRADE!

There is definitely an increasing trend towards conservative grading of BU coins. Several factors have contributed to this relatively recent trend—not the least of which, of course, is the fact that coins simply cost so much more now than they did just a few years ago. Buyers examine their purchases much more carefully. In addition, a considerable amount has been written about grading in recent years and the astute collector/investor uses this newly available information—particularly when buying in the choice or gem category. As a result, dealers have changed their buying habits. Since a dealer knows that his clients are more sophisticated now than, say, three or five years ago, he makes absolutely sure that each coin he purchases for resale will stand up under today's new and considerably more thorough scrutiny. In itself, of course, this return to conservative grading is certainly beneficial to the hobby in general—and, specifically, to those investors (collectors are investors, too) who make certain they are getting exactly what they are paying for.

There is "another side to the coin" however. Numerous dealers feel that the current demand for quality is somewhat misguided—at least in relation to what those demanding top quality merchandise are willing to pay for it. An example which dramatically illustrates this position is a teletype message which was monitored recently. A dealer was attempting to buy several of the more high powered Franklin half dollar rolls and his message stated that his customer would accept only rolls in which each coin was a full gem specimen. He further indicated that he was willing to pay five percent below current bid levels for the rolls needed! Of course, there is absolutely nothing wrong with an investor demanding top quality coins—as a matter of fact, such an investment will prove to be the most advantageous in future years. However, expecting to buy the ultimate in quality and pay only the MS-65 bid—or as in this case, even less—is most unrealistic. Another illustration of over-expectation

THE COIN DEALER NEWSLETTER reports the national coin market on a weekly basis and the MONTHLY SUMMARY and Complete Series Pricing Guide reports on those areas covered on a monthly basis. Under the present system, it is impossible to monitor all transactions or offers to buy and sell, but the broad information sources of the CDN publications make them a very accurate reflection of the market. INVESTORS NOTE: the prices in the CDN publications are from dealer-to-dealer transactions. As an investor, you may place your buy and sell orders through a dealer for a fee, as you would buy stock through a broker.

"MS-65" vs "GEM"

(continued from page one)

by many current buyers: a dealer recently showed members of the CDN staff a strictly choice MS-65 Walking Liberty 1941-47 "short set"---the coins had been selected from original rolls and were "choice" in every respect. Yet the set had been returned by a retail customer (who had paid the current CDN "ask" price) because the S-mint coins were not fully struck in the head and hand areas of Liberty! Needless to say, the next customer was very happy with this choice set; the first customer is probably still looking for a set containing six of the rare fully struck gem S-mint coins---expecting, again, to pay only the MS-65 price! Not many dealers who have this sort of outstanding material are going to part with it at the MS-65 price level.

These are only two of many such examples which are encountered more and more frequently in the coin market today. The point being made is that MS-65 coins are not "gems"---they are choice original 8U coins, but they are not MS-65+/70 or MS-70 coins. In virtually all series (even such late issues as Jefferson nickels) gem coins command a premium. Bid levels in the weekly CDN, as well as in this new "MONTHLY SUMMARY", are clearly labeled and the MS-65 bids are for just that---MS-65 coins---not perfect gem specimens.

This problem of MS-65 grade is no where more evident than in the Morgan and Peace dollar series. Only a year or so ago, MS-65 silver dollars were choice BU fully struck coins with "minimum" of marks and abrasions. Today, however, many buyers are demanding virtually perfect coins---full sharp strikes with no marks---and again they often expect to pay only the MS-65 bid price for them. One major dealer recently returned a number of relatively expensive Morgan dollars to the potential seller because they were not choice enough to meet his MS-65 grading standards. The interesting thing about this incompleting transaction is that these dollars were bought about two years ago from this very same dealer---they were still in the original envelopes which were marked "gem MS-65+". This is not to infer that any particular dealer is unscrupulous and simply took advantage of an investor a couple of years ago. The fact is that this dealer's clients are so much more quality conscious today that a silver dollar which was considered "gem" two years ago does not even now fit into the "choice" category! True gem silver dollars are rare---and are well worth a premium over the MS-65 bid levels.

The problem becomes even more difficult when we consider other denominations. There are not many knowledgeable numismatists around today who would expect a Morgan dollar to be absolutely flawless and still priced at the MS-65 level. However, there are numerous potential buyers of Seated Liberty and Barber coins, for instance, who are expecting to locate superb, absolutely blemish-free, fully struck coins---and who do expect to pay the MS-65 price---or even less! This, of course, is a virtually impossible mission. One need only to sit through a major auction of properly graded material to see that true MS-65+/70 gems bring considerably over the current bid-ask prices for MS-65 pieces. As a matter of fact, superb examples of even relatively common type coins often bring from fifty percent to as much as double "ask"! The educated collectors who are buying these coins know from experience that truly superb examples are few and far between and they are determined to buy when the opportunity is presented. Months---often years---of research have shown these bidders that the chance to buy truly gem specimens for date sets or type sets occurs on only widely scattered occasions and they do not want to pass up an opportunity. An example is the \$2800 recently paid for an outstanding 1919-D Walking Liberty half dollar at the Paramount Auction. Current teletype bidders are offering only \$1700 for a coin which fits the MS-65 description (the current "Redbook" listing for BU is \$950). It should be noted that the specimen which brought \$2800 wasn't graded as a "gem"---what a superb piece might bring (if available) is anybody's guess!

If a choice BU MS-65 Morgan dollar is allowed to have a "minimum" of marks or abrasions, why shouldn't an MS-65 Seated Liberty, Barber or Walking Liberty half be allowed to have the same "minimum" of bag nicks or abrasions? A Barber dime, for instance, with a bag nick or abrasion is removed by many from the MS-65 category---but shouldn't the same "MS-65 standards" apply to Morgan dollars, Seated Liberty halves and Barber dimes alike? A fully struck coin of any denomination with absolutely no imperfections of any sort is a "gem" and certainly should command a considerable premium when it changes hands. This, of course, is understood by many---but, in the opinion of numerous major dealers, other buyers are beginning to expect far too much out of the MS-65 grade!

SUBSCRIPTION INFORMATION: The MONTHLY SUMMARY and Complete Series Pricing Guide is mailed each month to subscribers of the weekly COIN DEALER NEWSLETTER at no extra charge!

A subscription to the weekly COIN DEALER NEWSLETTER is: \$11.75 for three months, \$40.00 for one year and \$70.00 for two years. A subscription to the MONTHLY SUMMARY and Complete Series Pricing Guide alone is: \$15.00 for one year and \$25.00 for two years.

AUCTION TRENDS

(continued from page one)

1927-S, Unc-65+ "Unquestionably one of the finest known of this date . . . have never seen a more sharply struck specimen . . . head and skirt lines are virtually full; only the hand is a trifle weak" - \$650 (current \$575---probably one of the best buys in this section of the auction; while weak and "average" strikes are not particularly scarce---an original BU roll was broken up not too long ago---sharp strikes are very, very scarce.)

1928-S, Unc-60+ "Similar in strike to the 1927-S . . . a curious scrape about the perimeter of the reverse, affecting most of the letters of the legend and several of the eagle's wing tips . . . would still fit nicely into anyone's choice uncirculated set" - \$1000 (current bid \$875---this coin is included because of the fact that it realized a very impressive price in spite of the impairment; a fully struck MS-65 or better specimen would most likely bring a price in excess of \$1500 in today's active market.)

1929-D, Unc-65+ "Temptingly close to MS-60 . . . fully struck" - \$425 (current bid \$250---usually considered fairly plentiful in spite of the relatively low mintage; perhaps this issue will prove to be a "sleeper"!)

1929-S, Unc-65+ "exceptional for this date, with the head virtually full . . . complete skirt lines . . . hand a trifle weak" - \$450 (current bid \$280---this issue has finally been realized as more scarce in top condition than the Denver coin; this may well be a record price.)

1933-S, Unc-65+ "The sharpness of the strike leaves nothing to be desired, nor do the immaculate surfaces . . . worth a record price" - \$800 (current bid \$500---this is almost certainly the "record price" expected; in January of 1975 this coin was bid at only \$175---quite an investment for those fortunate enough to have acquired a few pieces only a year and a half ago when they were considerably more easily available!)

The early dates omitted from the above listing were either "average strikes for the date" or had minor impairments of one sort or another; prices realized were in line with quality. It is obvious that choice early Walking Liberty halves are still enjoying strong collector demand---and, when exceptional MS-65+ specimens come along, the bidder competition is extremely keen. The dates in the '34-'40 group were also quite strong in spite of the recent profit-taking evident for these dates on the teletype circuits. Among the impressive prices brought by specific dates in top condition are: 1934-D \$260, 1936-D \$230, 1937-D \$300 and 1939-S \$125. Teletype buyer interest, by the way, for choice MS-65 BU rolls in the '41-'47 "short set" is on the increase (even though most bidders are sticking to present price levels). Nearly all of the San Francisco issues, it should be mentioned, are generally found in "average for the issue" condition---the day will come when the '42-'46 S-mint singles in fully struck MS-65/better will command as much attention as does the more highly publicized 1941-S. (It might be mentioned that the late date S-mint coins in the Elrod collection were nearly all of the "average strike" quality with the "usual softness of strike".) Currently, discerning investors can still locate an occasional exceptional example at or near the pro-rated "ask" price for BU rolls!

THOSE "Hot" TEXAS COMMEMS

During the past several months, Southwest Rare Coin Galleries, Inc. (a Houston-based firm) has been actively engaged in buying and selling the various Texas singles and PDS sets. As of the first of August, says a spokesman for the corporation, they have managed to locate approximately \$45,000 worth of the coins---through their regular daily teletype buying messages, at conventions and through various other buying ads. Nearly all of these purchases have already been placed with investors!

The rationale behind this rather extensive buying in one particular area of commemor is that, with some well placed advertising, many Texans who aren't even aware that such coins exist will decide they want to own one---or perhaps a complete set! After all, who is more proud of their home state than a Texan? So far this thinking has been right on target. One investor, as a matter of fact, has already purchased a roll set---including the very scarce 1938 PDS issues (total number of sets minted: 3,775). In talking with a representative from Southwest we were told that all of the low mintage 1938 issues were available only one out of twenty millionaires in Texas could own a set! And, of course, one must take into consideration the large number of Texas commemor which are already impounded in permanent collections.

Since January prices for the four PDS sets have already advanced an average of about twenty seven percent---not bad when one considers the fact that the silver coinroom market in general has moved ahead only five percent or so in this same period! Furthermore, says Southwest, a forthcoming ad in the TV section of The Houston Chronicle has already resulted in a nationwide press release covering Texas commemor and the "home state" interest. Who knows, maybe Arkansas or Oregon---or any of several other states---is next!

Common date coins in the following listings were computed on a basis of gold bullion at \$112.50 per ounce.

GOLD SERIES by date

The more common date silver rolls were computed on a basis of silver bullion at \$4.35 per ounce.

CIRCULATED ROLLS

Earlier rolls average good; later rolls usually include higher grades.

Specific prices for choice BU early copper coins are impossible to report, bid-ask levels are determined by the quality of the individual coin concerned. Spotted or otherwise inferior coins may bring only a percentage of current Guidebook listings while exceptional specimens may bring as much as double.

THREE-CENT NICKELS

... an in-depth look

The three-cent nickel series has always been a popular one with collectors. This relatively short-lived denomination includes several interesting issues—the “open 3” and “closed 3” varieties of 1873, three “proof only” issues (1877, 1878 and 1886) and the very unusual “overdate proof” issue of 1887/6. The entire series consists of only twenty-seven coins.

Most of the major “old time” collections encountered include a complete set of three-cent nickels. However, they are almost always sets of proof coins—or, at least, most of the tough low mintage issues are usually in proof condition. Very few early collectors bothered to seek out BU specimens of the 1879-89 (less 1881) issues. As a result, the extremely low mintage business strikes of these years are far more difficult to locate than the corresponding proof coin. Actually, with the possible exception of the 1879 and 1888 issues, these dates are considerably more elusive in any grade than they are in proof condition. The Redbook has finally recognized this fact—the ‘77 edition now lists three dates (1883, 1884 and 1885) at higher prices in uncirculated than in proof; other dates which should follow this example are 1880, 1882, 1887 and 1889.

Collectors and dealers often “divide” the three-cent nickel series into two main groups—the “common dates” before 1877 (and including the relatively high mintage 1881) and the low mintage and “proof only” issues from 1877 thru 1889. This general thinking has resulted in several overlooked issues in the first group. The fact is that when attempting to locate truly choice MS-65/better specimens, buyers more often than not end up with a piece dated 1865—and, if not, chances are that it will be dated 1866, 1867, 1868 or 1881. The several other issues in the pre-1877 group vary considerably in scarcity and none of them should be listed as “common dates”—even though the ‘77 Redbook still places most of them in the lowest \$95 category. (“Bid” for the most common three-cent nickel issues, by the way, is currently \$120 for full MS-65 specimens.) While the 1869, 1870 and 1873 are not particularly elusive, all three deserve to be priced at least \$10-\$15 higher than the earlier dates. The 1873 “close 3” variety, it should be mentioned, is somewhat more scarce in uncirculated condition than is the “open 3” (all of the 1873 proofs are of the “closed 3” variety). The 1871, 1872 and 1874 issues are definitely more scarce in choice MS-65 condition and should carry catalog listings of \$30-\$40 more than the common dates. Both the 1875 and 1876 issues are seldom encountered in MS-65/better condition—a Redbook listing of at least \$50 over the common date price would be more in line with true scarcity.

When comparing pre-1877 proof issues with those from 1878 thru 1889 some interesting facts come to light! The current bid-ask level for choice MS-65 three-cent nickel proofs is \$160-\$180—and a large number of proofs which change hands within this price range are from the pre-1877 years. Naturally the three “proof only” issues fetch higher prices (as does the scarce 1865)—and most dealers ask more than \$180 for the remainder of the 1877-89 proofs simply because of the low mintage figures for business strikes of these years (hence the tendency of collectors thru the years to accept proof when they would prefer BU specimens). However, since mintage figures for pre-1878 proofs are not given in the Redbook (with the exception of 1873) most collectors are unaware that all of the 1865-76 proof mintages are considerably

lower than those of the later years. Scott's Comprehensive Catalogue lists the following approximate mintage figures for the earlier years:

| | | |
|------------|-------------|----------------|
| 1865 - 400 | 1869 - 600 | 1873 - 1100 |
| 1866 - 725 | 1870 - 1000 | 1874 - 700 |
| 1867 - 625 | 1871 - 960 | 1875 - 700 |
| 1868 - 600 | 1872 - 950 | 1876 - 1150 |
| | | 1877 - 900 (?) |

Comparing these figures with those which appear in the Redbook for the 1878-89 issues, one can easily see that the pre-1878 proof mintages range from less than half to as few as one tenth those of the later years (example: 1868 and 1869 - 600 proofs each, 1883 - 6,609 proofs). Yet, on the current market the pre-1878 proofs (except the 1865) tend to bring less—or at least the same, as the far larger proof mintages of the 1880's. It should also be added that a smaller percentage of the earlier proofs appear for sale in strictly choice MS-65/better condition; the 1879-89 dates were generally better preserved due to much lower overall mintage figures (business strikes plus proofs) and somewhat exaggerated scarcity.

THE RARE “1916/16-P” BUFFALO NICKEL

Several subscribers have written to us since publication of the first CDN Monthly Summary to ask about the “1916/16-P” listing which appears in the Buffalo nickel price chart on page five. The above exclusive photograph is of an uncirculated example of the coin in question. As the picture shows, this is not a mere “recut date”—but a sharply doubled date much like the 1955/55 Lincoln cent (and more pronounced than the 1972/72 version). However, since the 1916/16-P nickel is not listed in the Redbook, relatively few dealers or collectors know of its existence. A few knowledge numismatists—including, of course, most “Buffalo buffs”—have been on the lookout for specimens for a long time. They have—on widely scattered occasions—been able to locate circulated pieces for the very low common date price.

Actually, circulated specimens are quite scarce—and uncirculated examples are rare. Estimates of the number of extant BU 1916/16-P's range from as few as three to perhaps “as many” as a dozen! Current bid prices are: \$60 VG, \$150 Fine, \$200 VF, \$350 XF, \$500 AU, \$800 MS-60 and \$1350 MS-65. These bids are the actual buying prices of a major teletype dealer who specializes in “errors”. This firm, according to a spokesman, has located only four or five pieces during the past two years of searching—and none were in mint state.

Perhaps the above photograph will prompt dealers and collectors to look more closely at circ 1916-P nickels—and, as a result, more specimens may enter the marketplace. The 1916/16-P Buffalo is probably at least as scarce as the 1918/17-D in the various circulated grades—and is even more rare in uncirculated condition. The only actual sale of a BU example in recent years that

THE COIN DEALER NEWSLETTER reports the national coin market on a weekly basis and the MONTHLY SUMMARY and Complete Series Pricing Guide reports on those areas covered on a monthly basis. Under the present system, it is impossible to monitor all transactions or offers to buy and sell, but the broad information sources of the CDN publications make them a very accurate reflection of the market.

INVESTORS NOTE: the prices in the CDN publications are from dealer-to-dealer transactions. As an investor, you may place your buy and sell orders through a dealer for a fee, as you would buy stock through a broker.

THREE-CENT NICKELS . . . an in-depth look (continued from page one)

Of course, the true scarcities in the three-cent nickel series are the very low mintage business strikes that were produced from 1879 thru 1889—these are extremely elusive coins in all grades. Several teletype bidders are in the market for all of these tough dates; frequent buying lists meet with only very limited success. The following are the latest largely unsuccessful bids for pure as well as uncirculated specimens:

| | Good | VG | F | VF | XF | AU | MS-60 | MS-65 |
|------|------|------|------|------|------|-------|-------|-------|
| 1879 | \$15 | \$20 | \$25 | \$35 | \$45 | \$ 60 | \$100 | \$185 |
| 1880 | 16 | 22 | 27 | 36 | 48 | 65 | 110 | 200 |
| 1882 | 17 | 23 | 28 | 37 | 50 | 70 | 115 | 200 |
| 1883 | 25 | 34 | 45 | 55 | 70 | 90 | 150 | 210 |
| 1884 | 36 | 42 | 55 | 67 | 85 | 105 | 175 | 250 |
| 1885 | 45 | 50 | 62 | 82 | 95 | 125 | 200 | 275 |
| 1887 | 42 | 47 | 62 | 78 | 95 | 110 | 175 | 250 |
| 1888 | 13 | 15 | 18 | 21 | 27 | 35 | 85 | 150 |
| 1889 | 15 | 19 | 20 | 26 | 32 | 42 | 95 | 175 |

It should be mentioned that it is often very difficult to tell "first strikes" from proofs in the low mintage years. Many of the business strikes were struck from the same dies as the proofs and thus exhibit proof characteristics. Conversely, in many instances the proof dies were not maintained properly throughout the entire minting and proof specimens are frequently encountered with "frosty" areas rather than an overall proof surface. As a matter of fact, several instances of "BU" 1886 three-cent nickels (a "proof only" year) have been noted in major selling lists; these coins exhibit almost none of the typical proof characteristics—except, perhaps, for the more squared edge. Care should be exercised when paying well over the proof price for BU specimens of the 1879-89 years—semi-frosty proofs are often listed for sale as uncirculated.

★ AUCTION TRENDS

In an exclusive interview with Norman Staek, the CDN was told that approximately 85% of the 4187 lots in the Staek's A.N.A. auction sale went to highly competitive floor bidders. In most instances, mail bids were immediately topped—and were ultimately left far behind. This hotly contested "floor action" was instrumental in bringing the total sales in this outstanding auction to "what must be a record-breaking \$4,008,165"! Only one previous A.N.A. auction contained more lots than this year's—in 1952 several dealers joined in presenting an auction consisting of 4780 lots. The '76 auction is by far the largest and most comprehensive ever held by a single firm.

The overall registration for this year's A.N.A. Convention reached almost 25,000—the bourse area of nearly 200 dealers was "elbow to elbow" throughout the entire week of this major numismatic event. The auction room in the Americana Hotel was literally packed to capacity throughout many of the several sessions of the sale. Mr. Staek pointed out that it was generally a "standing room only" situation—so many people registered for the auction that the supply of bidder cards was exhausted for a time!

In line with the current search for quality, virtually any coin which fell into the "gem" category brought a record-setting price. Superb "type" examples, of course, enjoyed extremely competitive bidding and those issues with low mintage business strikes—along with the scarce and rare branch mint material—continued to reflect the very strong demand which has been evident for some time now. Dealer "bid-ask" levels were topped by substantial margins as anxious floor bidders vied for a chance to take home some of the outstanding material from this auction.

Another trend which became more evident during this auction was a definite revival of serious interest in circulated key date coins. Mr. Staek states that this trend is long overdue—that rarity and frequency of offering are factors which more and more numismatists are beginning to take into consideration. Many more collectors are now realizing that, in numerous instances, a nice VF, XF or AU specimen of a rare date is a highly desirable acquisition. There are many coins for which uncirculated prices have been listed in the Redbook for years at very reasonable levels—and yet uncirculated specimens are extremely rare (perhaps less than half a dozen known) and very, very seldom offered for sale. The few sales records for these rarities have consistently been from triple to as much as ten times Redbook listings at the time of sale. It is in this area that Mr. Staek feels the need for a more widespread knowledge of rarity and frequency of offering. Simply the fact that a particular coin carries a numerical catalog listing in BU condition can cause a collector/investor to "pass up" rare top grade circulated pieces—still expecting to locate the virtually impossible BU specimen.

SUBSCRIPTION INFORMATION: The MONTHLY SUMMARY and Complete Series Pricing Guide is mailed each month to subscribers of the weekly COIN DEALER NEWSLETTER at no extra charge!

A subscription to the weekly COIN DEALER NEWSLETTER is: \$11.75 for three months, \$40.00 for one year and \$70.00 for two years. A subscription to the MONTHLY SUMMARY and Complete Series Pricing Guide alone is: \$15.00 for one year and \$25.00 for two years.

This true rarity in uncirculated condition is generally associated with the very low mintage issues—usually San Francisco, New Orleans or Carson City coins. Yet frequency of offering is far more important when determining value than a strict reliance upon mintage figures. There are numerous instances which could be listed—far too many for this article. But one particular example which will dramatically illustrate this point is the 1853-O dime. This issue has a relatively large mintage of 1,100,000—yet it is highly doubtful if more than six BU specimens are known. The Redbook currently lists this rarity at \$550—only \$100 more than the "common date" price for any "variety three" Seated Liberty dime. (The present dealer "bid" for full MS-65 specimens of any date of this "type" is \$615.) There are collectors who have probably rejected choice XF or AU specimens of this date without knowing that the opportunity for buying a BU specimen might be years away—if ever (and that the price at a major auction would almost certainly be many multiples of the current catalog listing). Perhaps the new interest in circulated key date coins that Mr. Staek has noted will hail the beginning of a more knowledgeable and logical approach to many of this undervalued coins!

UP-DATE ON THE "ELROD" 1921-S HALF DOLLAR

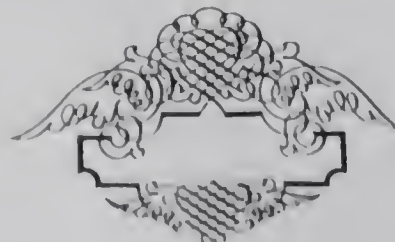

The "Auction Trends" column in the August issue of the Monthly Summary included mention of the sale of a rare MS-65 specimen of the 1921 San Francisco Walking Liberty half dollar. To repeat the description which accompanied the coin in the July 9th Paramount auction—"no 1921-S in existence could have lustre and surfaces superior to this piece . . . not completely struck up although the head of Liberty is the only area of the coin where any details are lacking . . . no significant handling marks of any kind . . . a tiny rim nick just following the last A of AMERICA".

This coin has now changed hands twice since it brought \$9500 at auction two months ago. It was sold by Robert L. Hughes, Inc. to New England Rare Coin Galleries during the A.N.A. Convention in New York City—and it was then resold to a collector before the close of the A.N.A. for \$13,500! The current teletype "bid" for this twentieth-century rarity, by the way, has now moved to \$9000—exactly double the '77 Redbook "Unc" listing of \$4500!

★ THE RARE "1916/16-P" BUFFALO NICKEL (continued from page one)

the CDN has been able to trace was in the \$2000 area—and it was not determined where this particular coin fell on the MS-60/MS-65 grading scale. The glamour of an "overdate", of course, exceeds that of a "double die". This, along with the fact that far fewer people are aware of the existence of the 1916/16-P, accounts for the much higher bids recorded for all grades of the 1918/17-D. Serious collectors of Buffalo nickels, however, will have a considerably more difficult time locating the still lower priced double die!

Common date coins in the following listings were computed on a basis of gold bullion at \$111.20 per ounce.

GOLD SERIES by date

Gem MS-65/70 specimens are worth more than the MS-65 prices listed below.

MINT ERRORS

by Fred Weinberg, guest columnist

One of the least understood, most overlooked and exceptionally interesting areas of numismatics is the field of "mint errors". At one time looked down on by both dealers and collectors, this fascinating area is now experiencing collector interest never before seen. The appeal of mint errors is varied---they are collected because of the most unusual appearance of the coin, because no two major errors are ever alike and because it is a challenge to find them due to rigid quality control at the Mint. Still, there are sufficient examples available so that type sets, collections, and even date and mintmark sets are possible to complete.

The U.S. Mint makes billions of coins each year. Even over a hundred years ago, mintages of a million or more were not uncommon. If you were head of "quality control" in a manufacturing plant, what would be an acceptable percentage of defective products to come off of your assembly line? 4%? 2%? or 1/4%? Consider a mintage of only one million pieces for a particular date---a percentage of "error" of only one-thousandth of one percent (.001) would result in a total of one thousand errors. Although it is very difficult to estimate, I would say that U.S. Mint releases (as an average over the past twenty years) only one thousand mint errors a year. Some years there are far fewer, some years more---if you include every off-center cent that might be found. The point is that in relationship to the mintage figures for "regular issue" coins, any mint error is extremely rare! It must be noted that I am considering major striking errors---not die varieties that might be produced for the entire life of a particular die.

The supply of any type of major error is limited because most are caught at the Mint and remelted. Only a small fraction of error coins minted are ever released into circulation through the Federal Reserve Banks---in the bags of coins that are shipped by the Mints. The Mint, being the authority that strikes and releases our currency, is proud of its work and tries its best to "cull" out all errors coins. These are immediately pulled, placed aside and then destroyed. Also, distribution is not the same as for proof sets and mint sets; mint errors are sent all over the country at random---many will never find their way onto the market.

Demand is another consideration. In the past (actually up until the last twenty years) mint errors were looked upon as the "junk" of numismatics. They were given away, sold at face, sold for 2¢ over face or literally thrown away when they were found. The Dr. Bolt Collection of mint errors, sold two years ago, contained many rare and unique pieces with notations written on the holders to just that effect. That collection---the largest of its kind to ever come on the market---was sold in excess of \$100,000.00. There were many very eager buyers for the rare types and unusual errors that were included in the very extensive collection. This interest is witness to the kind of market, still unexplored and overlooked, that has been growing in the mint error field during the past few years.

Today, at any coin show across the country, mint errors not only win top prizes in display competition, but they are probably the most popular coins as far as public viewing is concerned. One reason most dealers and investors haven't considered "errors" is that it is a sophisticated, technical field---too "far out" for most. Actually a solid background in mint errors, based upon knowledge of the minting process, is of invaluable help in all other areas of coin collecting. Counterfeits, altered dates, altered surfaces---are much easier to spot and understand when you know exactly how a coin is made in the first place. Many dealers and collectors have no thorough idea of how coins are made. A working knowledge of the minting process is your best defense against counterfeits---and it is your first step to understanding and appreciating mint error coins.

For the purpose of this article, I will limit discussion to the three main areas that are the most popular and significant in mint errors. These are: Off-Center Strikes, Double Strikes, and Wrong Metal Strikes. There is also strong collector interest in doubled dies, clipped planchets, minor die-breaks (cuds) and die varieties. One of the hottest areas in silver dollars today is collecting by die varieties---silver dollars offer some of the most exotic and unusual examples of die varieties available. Remember, in mint errors you can collect anything you want---anyway you want; there are no books, boards or complete sets to fill. You start and complete your collection at whatever point you wish.

OFF-CENTER STRIKES

This most popular mint error occurs when a planchet is struck while lying partly within and partly outside of the retaining collar. When the dies come together to strike the planchet, the portion which lies outside the collar will be blank. The off-center strike is measured by the amount of blank area on the coin---not by the amount of design showing, as it will be distorted in many cases by the many tons of pressure used to strike the coin. This error is fairly common on cents and nickels and becomes increasingly scarce (and more eye appealing) in direct proportion to the higher denominations. Off-center halves and dollars are quite scarce---with the quarter not far behind. It should be remembered that in earlier type coins the Mint made very, very few major errors of any type---they are avidly sought after whenever an example appears for sale. Generally, the most

The DOLLAR EISENHOWER

...until now

If the Treasury discontinues the minting of the present dollar coin as it is contemplating, the Eisenhower series would be the shortest-lived of all twentieth-century designs. It would not, however, contain the fewest number of coins. Due to differences in metal content, varieties and various non-circulating issues, there are already twenty-six coins in a complete 1971-76 set of Ike dollars. There also may well be 1977 dated dollars minted while Treasury officials are studying recommendations for a new and smaller dollar coin. The Peace dollar set, therefore, will still hold the distinction of being the shortest twentieth-century set---with only twenty-four individual issues.

As the series now stands, mintages for the 1971-74 issues range from a high of over ninety-two million to a low of just slightly over one million. Using mintage figures as published in the current Redbook, these first eighteen issues fall into the following order:

| | | | MINTAGE | Bid (Oct. 1, '76--- figured on a roll basis) |
|-----------|--------|---------|-----------------------|---|
| | | | | |
| CHART ONE | 1973-S | 40% Pr. | 1,005,617 | \$510.00 |
| | 1974-S | 40% Pr. | 1,314,608 | 187.00 |
| | 1973-P | Cl. BU | 1,767,691 each | 117.50 |
| | 1973-D | Cl. BU | (from mint sets only) | 117.50 |
| | 1972-S | 40% Pr. | 1,811,631 | 140.00 |
| | 1973-S | 40% BU | 1,883,140 | 79.00 |
| | 1974-S | 40% BU | 1,900,000 | 77.00 |
| | 1972-S | 40% BU | 2,193,056 | 58.00 |
| | 1974-S | Cl. Pr. | 2,617,350 | 51.50 |
| | 1973-S | Cl. Pr. | 2,769,624 | 53.00 |
| | 1971-S | 40% Pr. | 4,265,234 | 86.00 |
| | 1971-S | 40% BU | 6,868,530 | 43.00 |
| | 1974-P | Cl. BU | 27,366,000 | 22.50 |
| | 1974-D | Cl. BU | 45,517,000 | 22.50 |
| | 1971-P | Cl. BU | 47,799,000 | 26.50 |
| | 1971-D | Cl. BU | 68,587,424 | 27.00 |
| | 1972-P | Cl. BU | 75,890,000 | 27.00 |
| | 1972-D | Cl. BU | 92,548,511 | 26.50 |

One disparity that is immediately apparent from Chart One is that the price difference between the "first place" 1973-S 40% proof and the "second place" 1974-S 40% proof is far greater than it seems the mintage difference would warrant. Dealers are currently having almost as much difficulty locating the '74 version as they are the much higher priced '73---and chances are that buyers will increase their bids faster for the lower priced issue. The two "mint set only" issues (1973-P & D) also seem quite reasonable at current levels with their third and fourth place mintages of only 1,767,691 each---the fifth place 1972-S 40% proof is bid 20% higher with a mintage of 1,811,631.

Then there is the interesting difference in bid prices for the 1972-S 40% proof and the 1973-S 40% BU issues. Mintages are virtually identical, yet the former is bid at \$140 per roll and the latter at only \$78. Well down the chart (in eleventh place) is the highest mintage of all the 40% proofs---the 1971-S version. Yet the bid for this issue currently exceeds those for the five issues above it in the chart---all of which can boast of considerably lower mintages.

Of course, original sale prices thru the Treasury tend to influence current prices---but, in the long run, availability will be the major price determining factor.

THE COIN DEALER NEWSLETTER reports the national coin market on a weekly basis and the MONTHLY SUMMARY and Complete Series Pricing Guide reports on those areas covered on a monthly basis. Under the present system, it is impossible to monitor all transactions or offers to buy and sell, but the broad information sources of the CDN publications make them a very accurate reflection of the market.

INVESTORS NOTE: the prices in the CDN publications are from dealer-to-dealer transactions. As an investor, you may place your buy and sell orders through a dealer for a fee, as you would buy stock through a broker.

MINT ERRORS (Continued from page one)

desirable off-center for any type of denomination is at least 20%—but not more than 80%—off-center. This “spread” will at least show a nice blank portion and, at the other end of the scale, will show enough of the design of the coin to be identifiable. Of course, off-centers of less than 20% or more than 80% are always collectable—especially if they are on rarer type coins such as a twenty-cent piece, Bust half dollar or any gold coin. Condition is not of prime importance to the error collector but most prefer specimens that are at least VF/XF. Choice uncirculated examples will bring more, naturally—and major cuts, scratches, and other circulation defects will lower the valuation somewhat. In error collecting, the error is the most important aspect of the coin; a small nick or dent will not prevent a serious collector from adding a desirable error to his collection.

Some type coins are extremely rare in off-center—or are only known “10% off” at the most. Experienced collectors and dealers know which series are extremely rare and which are likely to bring higher prices in the years ahead.

DOUBLE STRIKES

Probably the most dramatic of all mint errors, “Double Strikes” are the result of a planchet being struck once normally—and then once again—instead of being ejected from the coining chamber and going to the counting and bagging area. There are two basic types of double strikes. A coin that remains in the striking collar and is turned and struck again is known as a “Double Strike Within the Collar”. The rotation can be slight—or can be 180° from the original (underlying) strike. Generally, the greater the rotation and the sharper the details of both strikes, the more desirable and valuable is the coin. A coin struck properly in the collar the first time and then struck again while only partially ejected is known as a “Double Strike, Second Strike Off-Center” or more simply “Double Strike Outside the Collar”. There are coins with three, four and five strikes, but they are quite rare and are snapped up by eager collectors. As in off-centers, the higher the denomination the rarer the coin. Double struck cents and nickels are fairly common—the other denominations are not often seen. Due to size there is a stronger likelihood of their being caught at the mint and remelted. Double strikes for certain type coins are unknown—others are considered “Rarity 8”.

Like off-centers, double strikes are collected by date, percentage of second strike showing and location of the second strike. Many interesting and unusual sets have been assembled by serious collectors who have taken the time and interest to collect these rare and unusual pieces. Type sets of modern coinage—or of type coinage—can be collected. Remember, each double struck coin is unique; there are pieces similar to one another—but none exactly alike.

WRONG METAL STRIKES

“Wrong Metal” or “off-metal” errors can be the most exotic of the major error coins. They are coins which are struck on the wrong blank planchet or on a planchet of a different metal than was intended. Examples are: Lincoln cents struck on a dime planchets, a Washington quarter struck on a cent planchet or an Ike dollar struck on a half dollar planchet. It should be remembered that the blank has to be the same size (or smaller) than the coin die that will strike it. In other words, you cannot have a Roosevelt dime on a cent planchet because the cent is a larger size than a dime and will not fit into the feeding mechanism or the coining chamber. A Roosevelt dime wrong metal strike has to be on a foreign planchet—or on a partial planchet of some other larger denomination.

Transitional coins are the ultimate wrong metal strikes. They are pieces struck on the proper size planchet but of a metal composition that was ended the preceding year. For example, a 1965 dime struck on a silver dime planchet is a transitional coin because 1964 was the last year of silver dimes—yet one or more silver planchets were struck with the 1965 date. A 1942-P warrnickel struck on a regular nickel planchet from 1941 would also be considered a transitional coin. All transitional errors bring at least a five-figure price when offered. The famous 1943 copper cent is probably the best known example—it is valued at over \$10,000.00! Wrong metals can be collected by date, type and denomination. Many collectors try to get an example of, say, a Washington quarter struck on a cent, nickel and dime planchet. From there they might attempt the same for halves and dollars. Although a Walking Liberty half struck on a quarter planchet is extremely rare, a Lincoln cent struck on a clad dime planchet is certainly as interesting and desirable as any example of a wrong metal strike. There are a few famous collections of “Wrong Metals” that have an example of each date and mintmark known to be struck on wrong metals and different planchets. One was displayed at the recent A.N.A. Convention—and it was the most talked about exhibit by the public—most of whom have never even known such pieces existed. When buying and collecting “mint errors”, it must be remembered that they are extremely rare in comparison to regular strike coins—the supply is always limited, even on the most common off-center and double struck coins. Although demand is currently very strong from error collectors, collectors in general (including dealers) have either ignored or have not been aware of the popularity and growing interest in this field. During the past few years interest has grown tenfold—but the “error coin” field is still in its infancy. Fortunately, there are a number of good books on the minting process and on understanding and collecting mint errors, so that lack of information is not a problem. Understanding how coins are struck and how mint errors occur is the first step towards having the good working knowledge that will enable you to purchase and form a collection of the best available examples.

Recommended reading for those interested in “error coins” includes: The Official Guide to Mint Errors by Alan Herbert and Modern Mint Mistakes (Fifth Edition) by Steiner & Zimpher. Also, a monthly publication, Error Trends Coin Magazine, gives a considerable amount of information on the subject, including prices—and the same publisher, Arnold Margolis, offers a yearly or bi-yearly book called “Numismatic Error Primer” which provides information which the beginner as well as the advanced collector will find extremely useful.

SUBSCRIPTION INFORMATION: The MONTHLY SUMMARY and Complete Series Pricing Guide is mailed each month to subscribers of the weekly COIN DEALER NEWSLETTER at no extra charge!

A subscription to the weekly COIN DEALER NEWSLETTER is: \$11.75 for three months, \$40.00 for one year and \$70.00 for two years. A subscription to the MONTHLY SUMMARY and Complete Series Pricing Guide alone is: \$15.00 for one year and \$25.00 for two years.

The EISENHOWER DOLLAR (Continued from page one)

Few official mintage figures are available for the Bicentennial design Eisenhower dollars which carry the 1776-1976 date—the eight issues involved are:

| CHART TWO | Bid (Oct. 1, '76) | |
|-----------|---------------------|--------------------------|
| | 1976-P (I) Cl. BU | 3,644,000 |
| | 1976-P (II) Cl. BU | \$ 33.50 |
| | 1976-D (I) Cl. BU | 22.00 |
| | 1976-D (II) Cl. BU | 23,000,000 (approximate) |
| | 1976-S (I) Cl. Pr. | 24.00 |
| | 1976-S (II) Cl. Pr. | 22.00 |
| | 1976-S 40% BU | 2,909,369 |
| | 1976-S 40% Pr. | 70.00 |
| | | 33.00 |
| | | 15 million projected for |
| | | 75.00 |
| | | the two issues combined |
| | | 135.00 |

As you can see, the only Bicentennial dollar issues in Chart Two which will be included in the “top ten” (with mintages under four million) are the 1976-S “type one” clad proofs, the 1976-S “type two” clad proofs, and the 1976-P “type one” regular clad issue.

The greatest mintages by far, of course, were of the Philadelphia and Denver coins minted for general circulation. It has become apparent, however, that few if any of these issues are really plentiful—at least at current market levels. After the initial publicity and interest which followed introduction of the new dollar coin subsided, very few investors, it seems, put away quantities of the uncirculated “P” and “D” coins. Most people felt that the amount of money “tied up” for an indefinite period made putting away a \$1000 bag of Ike dollars a poor investment. Now that interest in the Eisenhower series has increased considerably, dealers are finding that locating even a few BU rolls of 1971, 1972 or 1974-P & D dollars isn’t as easy as mintage figures would indicate. Although chances for an immediate major upswing in the prices of these rolls are slight, it is certainly reasonable to expect a steady advance during the next few years—with a possible flurry of activity following “official” discontinuance of the Ike dollar. Still, substantially higher bid prices often have a way of bringing a few “hoards” into the marketplace—so it remains to be seen how many circulation strike Eisenhower dollars are currently “in hiding”.

There is a twenty-seventh coin in the Eisenhower series—the 1974-D 40% silver uncirculated coin which was struck in error. Apparently a few 40% silver planchets found their way to the Denver mint and, at present, it is estimated that ten to fifteen specimens are known. One major error dealer has handed eight of these pieces during the past two years—and each has been sold in the \$2200-\$2600 range! A spokesman for this firm says that there are “at least five” clients on waiting lists for the modern rarity—and that no more examples been located during the past eight months. The ultimate Eisenhower dollar collection, then, would consist of twenty-seven coins!

SOME OVERLOOKED “COMMON DATE” SEATED LIBERTY HALVES

There are several “no motto” Seated Liberty half dollars which have been listed for years in the Redbook at strictly common date levels, but which are currently proving very elusive to buyers. Teletype dealers have little luck in finding more than an occasional single and collectors almost always find these dates missing from bourse tables. Two earlier issues are the 1845-P and the 1848-P—with mintages of 589,000 and 580,000 respectively. They are both quite scarce in all grades in spite of the common date status assigned to them in the latest Redbook. Dealers have recently been attempting to buy both issues on the various teletype circuits; so far, however, frequent bidding has produced few if any results. The following are the current largely unsuccessful bid ranges for both the 1845-P and 1848-P: G/VG \$8.50 - \$10; FINE \$15 - \$16.50; VF \$28 - \$31; XF \$65 - \$70; AU \$125 - \$140; MS-60 \$325 - \$350; MS-65 \$750 to as high as \$1000 according to quality.

A third “no motto” half is even more elusive than either the 1845-P or 1848-P. This is the 1862-P—with a mintage of only 253,000. Again this date is missing from most selling lists and bourse tables—and yet it remains in the Redbook at strictly common date price levels. Bidders are currently offering to pay as much as “double Redbook” for circulated specimens and bids for uncirculated examples are about \$350-\$400 for MS-60 and \$700-\$900 for choice MS-65/better. These bids are not meeting with success—it is obviously going to take higher buying prices to pry loose even a few pieces—probably considerably higher.

There are several other “no motto” issues which should be kept in mind: 1841-P, 1841-O, 1851-O, 1860-P, 1863-P, 1864-P and 1865-P. While none of these are rare coins, all are more difficult to locate than their common date Redbook listings would indicate. They can still, however, occasionally be located within present CDN bid-ask levels for the “type” because many sellers still refer to the common date Redbook listings. Of these dates, the 1841-P, 1860-P and 1864-P are the most difficult to locate. In uncirculated condition they are all very scarce (if not rare)—and, in choice MS-65 condition, all will bring substantially over the current “type” bid of \$600 if included in a major auction.

Again the Philadelphia mint offers some under-rated issues in the “with motto” type. While not as scarce as the above listed “no motto” issues, all the P-mints from 1866 thru 1870 are considerably more elusive than their S-mint counterparts (particularly 67-P and 68-P)—and all should carry Redbook listings higher than those for common dates. Bids for strictly choice BU specimens of these five Philadelphia coins usually exceed those for the San Francisco coins by at least \$100.

Common date coins in the following listings were computed on a basis of gold bullion at \$115.00 per ounce.

GOLD SERIES by date

Gem MS-65/70 specimens are worth more than the MS-65 prices listed below

The more common date silver rolls were computed on a basis of silver bullion at \$4.35 per ounce.

CIRCULATED ROLLS

Earlier rolls average good, later rolls usually include higher grades

a survey of...

MORGAN DOLLAR VARIETIES

by David Hall, guest columnist

Up until a few years ago very few people were interested in Morgan dollar die varieties. Now many of the major silver dollar dealers are actively buying and selling the more popular varieties. A new revised edition of the Van Allen/Mallis guide to dollar varieties is due off the presses any day now and one of the largest retail firms specializing in rare coin investment programs is undertaking a major marketing program emphasizing Morgan dollar varieties.

It should be strongly emphasized that most Morgan dollar varieties as listed in the "VAM" book are merely minor die shifts, date and legend recutting and doubling, minor die-breaks and fills and minor mintmark positional variations. The market for these hundred of minor varieties is extremely thin. There are, however, several major varieties which are quite actively sought after by dollar specialists at both the retail and wholesale levels. The following is a survey of these more significant Morgan Dollar die varieties. Bid/Ask prices indicated are for MS-65 coins and are current approximate dealer-to-dealer wholesale levels.

The 1878-Philadelphia issues. There are 230 varieties listed in the original edition of the VAM book! Although this is one of the most popular areas of collecting, I have yet to see a complete set of varieties of this issue. The three major reverse variations (7 tail feathers, 7 over 8 tail feathers and 8 tail feathers) are listed each week in the CDN. It should be noted the \$14.00 bid for the 7 tail feathers is for the common variety with the "concave breast" (reverse of 1878). The 7 tail feathers variety with the "round breast" (reverse of 1879) is also very actively traded (Bid \$20.00; Ask \$25.00). There is one variety (VAM-41) of the 7 over 8 tail feathers that clearly shows seven feathers underneath the top feathers; this might be called the "ultimate" 7 over 8 (Bid \$40.00; Ask \$50.00). CDN bid-ask levels are for coins which show at least four extra feather tips beneath the top seven. Another very interesting and popular variety is the 1878 7 Tail Feathers with a "four legged eagle"---the doubling of the eagle's legs is clearly visible without magnification (Bid \$25.00; Ask \$30.00).

1879-CC "capped die" mintmark variety. This variety is listed in the VAM book as the "large CC over small CC." The extra metal above and within the mintmark gives it a "dirty" or "rusty" look. Several rolls of 1879-CC dollars from the Redfield Estate were sold this year---they were all of the "capped die" variety. This is the only Morgan variety we will discuss which is less valuable than its "non-variety" counterpart. Due to the unattractiveness of the "capped die" mintmark, even choice MS-65 specimens trade at relatively low levels. (Bid \$350.00; Ask \$400.00).

1879-S "concave breast" of 1878. Until a couple of bags were released from the Redfield Estate this was a very difficult coin to locate. Still much scarcer than the "round breast" reverse of 1879. (Bid \$15.00; Ask \$18.00).

1880-P, 8 over 7. Of the five "so-called" overdate varieties, only two are unquestionably overdates. VAM-7 with the upper bar of the 7 showing within the upper circle of the 8 is listed as Rarity-8. (I have not personally examined this very rare variety in any grade.) VAM-6 with two spikes of metal showing above the 8 is unverified in true Mint State condition although "sliders" are occasionally offered. A choice MS-65 specimen of VAM-6 would undoubtedly bring well over \$1000.00!

The 1880-CC varieties. There were six different overdate varieties produced in Carson City during 1880. A few years ago the 1880-CC overdates were considered very rare. However, a large percentage of the 1880-CC's released in the GSA sales were overdates---thus Guidebook and wholesale prices have been lowered accordingly. Most of those released were the VAM 7 and 8 "dash" varieties---with a small dash of the 7 under the 8. The variety is traded at the same level as a normal die 1880-CC. However, there are four very distinct premium varieties: the 1880-CC-80 over 79 "concave breast" of 1878 (Bid 100.00; Ask \$125.00), the 1880-CC-8 over 7 "concave breast" of 1878 (Bid \$90.00; Ask \$100.00), the 1880-CC-8 over high 7 (Bid \$75.00; Ask \$85.00) and the 1880 CC 8 over low 7 (Bid \$80.00; Ask \$90.00).

The 1880-O, 8 over 7 is somewhat overrated in the guide book---but still a "steal" when located at the common 1880-O price (Bid \$65.00; Ask \$75.00).

1880-S, 8 over 7. There are many varieties of this issue but none of them can be sold at guide book levels. (Bid \$15.00; Ask \$20.00).

1882 thru 1884, O over O and S. There are multiple variations of the 1882, 1883, and 1884 O over O mintmarks. The variations are based on the position and size of the two mintmarks. Most of the varieties trade wholesale in the \$10.00 to \$15.00 range. The 1882-O over S is somewhat more desirable since it is included in the Guidebook (Bid \$15.00; Ask \$20.00).

1887-P, 7 over 6. The guide price has come down every year since it's discovery a few years back. Currently very stable at the \$150.00 Bid-\$175.00 Ask level.

1887-O, 7 over 6. Same comment as the above 1887/6. (Bid \$200.00; Ask \$225.00).

1900-O over CC. There are six different varieties---this is one of the "hottest" varieties. A very firm bid of \$35.00 produces few results; most dealers will not sell these wholesale---preferring to hold out for the \$49.50 retail sale which is almost a sure thing.

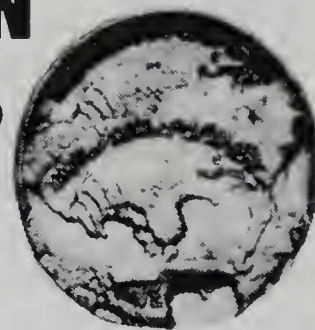

1921-P Infrequent Reeding. (Only 34 reeds per lineal inch). Get out your 1921-P Morgans and look at the edges. This is an obvious variety. (Bid \$12.00; Ask \$15.00).

There are four important varieties that are supposedly unknown in Mint State condition. They are on every variety specialist's buying lists and will bring very substantial premiums if and when they do turn up: the 1880-O VAM-10

(Continued on page two)

★ AUCTION TRENDS

STACK'S AUCTION
INCLUDES
MAJOR ERROR
COLLECTION

The recent Stack's auction of the William H. Fenn III collection (Oct. 9) included some extremely rare and interesting error coins. Since our October MONTHLY SUMMARY featured an article on errors and the current interest in them, it seems timely to report some of the most important prices realized at this very competitive auction. As the catalog indicated, this offering of eighty-four lots "embraced virtually every area of an oddity in coins---one of the largest and most interesting collections Stack's has ever offered at auction".

Among the several large cents were:

A 1797 "brockage" (another coin was still in the die when a blank was fed in---the result being a normal obverse and a mirror-incuse of the obverse of the next coin on the reverse). This VG specimen brought \$180.

An 1848 "25% off-center, in VF condition" = \$95.

An 1853 "10% off-center, uncirculated with traces of mint red" = \$150.

An 1835 "a most extraordinary double strike; the second strike at a 25% angle". This rare piece in VF condition sold for \$325.

Early small cent offerings included:

An 1863 "struck 85% off-center (in Kolt 12 position, date complete) uncirculated and proof-like" = \$160.

An 1863 "50% off-center, uncirculated and lustrous" = \$175.

An 1893 "double struck; second striking shows only the last 93". In Fine condition this specimen brought \$125.

An 1898 "double struck in the Kolt 12 position (two complete dates, one above the other", VF) = \$140.

There were a number of clipped planchet and off-center Lincolns in this auction. The clipped planchet pieces graded from XF to uncirculated and brought an average of \$5 to \$8 each (the dates ranged from 1911 thru 1920). The several off-center specimens also graded from XF thru uncirculated and ranged from 10% to 30% off center---priced realized were in the \$7-\$20 area (these as well as the clipped planchet pieces were sold in lots of five to ten coins).

MORGAN DOLLAR VARIETIES (Continued from page one)

"impaled eagle" with a large "spike" running thru the eagle's neck, the 1888-O VAM-4 "double profile", the 1901-P VAM-3 "shifted eagle" and 1903-S VAM-2 "small S". Watch for these four varieties---they can be easily spotted with the naked eye. If you find a BU 1880-O "impaled eagle" or 1888-O "double profile" you'll get \$500.00 to \$1000.00 for your effort! The 1901-P and 1903-S, of course, are rare dollars in any variety---but a BU 1901-P "shifted eagle" or 1903-S "small S" should also command a \$500.00 to \$1000.00 premium over the regular price level!

Serious students of Morgan dollars would do well to familiarize themselves with the various Morgan dollar varieties. It's an interesting field. For instance, most people know that Morgan's initial is on the base of the neck of Ms. Liberty, but how many people know that Morgan's initial is also on the reverse (on the left side of the bow at the bottom of the wreath)? And, to top it all off there are varieties of that initial---the 1884-P VAM-3 with a "large dot" after the "M" and the VAM-4 with a "small dot" after the "M"! A knowledge of varieties is also very helpful in detecting counterfeits. As an example, there is only one die variety for each of these often counterfeited dates: 1889-CC, 1893-S, 1894-P, and 1895-P---so detecting a counterfeit is made easy for the knowledgeable numismatist. But you might enjoy the best feeling of all while going through rolls of 1900-O dollars and picking out the "O over CC's" at \$8.00 per coin. Happy hunting!

Notes on Silver Commems

Locating many silver commemorative issues in choice BU MS-65 or even gem BU MS-65+ condition isn't a very difficult task. A vast majority of commems, of course, never saw circulation---and, of this majority, a healthy percentage have been well preserved since the year of issue. This isn't to say that there aren't plenty of "sliders" and MS-60 specimens on the market---only that for many issues finding choice pieces is relatively easy. There are, however, numerous exceptions---particular issues which vary in elusiveness from moderately tough to very scarce.

Taking a separate look at the Isabella quarter and the Lafayette dollar, we find that both coins currently bring substantial premiums when offered in "gem" condition by knowledgeable dealers. The Isabella, while sharply struck, was an issue which saw considerable circulation; XF, AU and "slider" specimens abound---together with a rather large percentage of the remaining pieces which must be properly graded as MS-60 due to poor preservation. Although the teletype bid has been advancing slowly in recent weeks, it seems that most of the specimens located on the circuits fall a bit short of the choice or gem category. True gems, it should be noted have recently registered retail sales in the \$400-\$450 range. The Lafayette dollar is victim of the same problems as the Isabella quarter---plus the additional one of general poor striking. "Gem" Lafayettes are the toughest in the entire commemorative series to locate. Again the teletype bid has been forging ahead in recent weeks---and again virtually all of the pieces offered to bidders have been rather optimistically graded. As a result, the dealer who locates a truly choice Lafayette can almost "name his own price". An "original toned gem, finest known" specimen was recently listed for sale on the teletype circuits for \$2500! While this price may be a bit strong even in today's quality-conscious market, sales of particularly choice pieces have been recorded within the past several months as high as \$1500!

There are three basic groups of "problem" coins among the half dollar issues---those which were poorly struck, those which appear most frequently with "cabinet friction" and those which are subject to more than the usual number of bag marks.

Two of the most poorly struck issues are two relatively common coins---the Seaside and the Sesquicentennial. As current respective ask prices of \$43 and \$49 indicate, "original BU" specimens are rather plentiful. Fully struck choice MS-65 pieces, however, are not. Occasional sales of exceptional pieces are noted at high as \$70-\$80, and there are many collectors who are still on "waiting lists" for the rarely encountered "gem". (The Sesqui, by the way, probably doesn't exist in gem condition, due to the very low relief of the dies.) Also in the "poorly struck" category is the Maine, and to a lesser degree, both of the Alabamas, issued in 1901 and 1902. These six also regularly bring at least small premiums when located in truly choice MS-65 or gem MS-65+ condition. It

should be noted that a Grant "with star" in gem condition may bring a substantial premium if offered to a "fussy collector".

Unfortunately for collectors, the "friction" group includes most of the "keys"---the Hawaii, Hudson, both Missouri issues, the Panama-Pacific and the Fort Vancouver. And to make matters more complicated, both of the above mentioned Grant issues also fall into this group. These key issues are among the most "returned" of all silver commems---due not only to the tendency of most specimens to show slight wear on the highest points but also, of course, to the fact that the higher price tags warrant a "closer look" before buying. "Gems" again often bring appreciably over ask---especially when being handled by an astute dealer. Several other less expensive commems also seem to exhibit friction more often than not---the California, both of the "common" Columbians, the Huguenot, Wisconsin and the Lincoln-Illinois. These issues, however, are still occasionally located by teletype bidders in MS-65+ condition for little or no premium above the current bid-ask ranges.

The last group of "problem" commems include those issues which are quite often found with bag marks or abrasions---in many instances due to broad unprotected areas of the design. Two more "keys" are included in this group---the Cincinnati issues and the Spanish Trail (both of which have extensive field areas which are subject to marks). Truly choice specimens of these two often bring moderate premiums of 10%-20% over ask when located with absolutely no impairments. Other issues which were designed with high flat areas in the design and which, therefore, are quite difficult to locate without at least minor marks include the various Arkansas and Boone issues (these many times are victims of small marks on the cheeks of Boone and the girl on the Arkansas coins). One collector recently stated that in several years of searching he had still not found any Booker T. Washington and Washington Carver sets which did not have at least a few minor abrasions on the high points. These sets are easily located, of course, in full original BU condition---but finding even a single set with no marks at all seems almost impossible. Certainly any "gem" set would realize a reasonable premium if offered to the right collector. Three other issues should also be mentioned when discussing a prevalence of marks on many of the specimens on the market---Long Island, Delaware and Robinson. At this point, as with several in the "friction" group, little or no premium is generally added to the price tags of exceptional pieces---but these, again, are issues which should be added to portfolios when located in top condition.

AUCTION TRENDS (Continued from page one)

Among the nickel errors in this auction were:

- An 1865 3¢ "struck 15% off-center, brilliant uncirculated and rare" --- \$115.
 - A no date Shield nickel struck on a three-cent nickel planchet "uncirculated and the only one heard of" --- \$280.
 - A 1908 Liberty nickel "planchet from end of strip, straight cut, 25% missing", in brilliant uncirculated condition --- \$75.
- The highlight of the error section of this Stack's auction was a double struck 1918 Buffalo nickel (see illustration above). This rare coin, in Brilliant uncirculated condition, brought a very impressive \$1000!

Several off-center Buffalos were also part of this auction---all were dated 1917 thru 1920, most were brilliant uncirculated. Prices realized for these pieces ranged from \$25 to \$180 according to the Kolt position, the percentage of the off-center strike and the date and mintmark of the particular piece. A 20% off 1918 brought \$90, a 20% off 1918-D sold for \$140, a 15% off 1919-S brought \$140, a 40% off 1920 fetched \$130 and a 90% off 1920 realized \$180.

Only one Barber dime was offered---a 1916-S which was "struck 15% off-center; brilliant uncirculated, delicate toning"---it brought \$65. The several off-center Mercuries (which again were all dated in the 1916-20 years) sold in the \$35-\$95 range---with the mintmarked pieces in BU condition fetching the highest prices. The highlight of the Mercury dime errors was a double struck 1920 "the second strike perpendicular to the first at eleven o'clock; two full dates showing---BU condition". The rare coin went to the high bidder at \$425.

Larger coins, of course, escape the mint in error form far less often than smaller ones. There were only four quarters in this auction sale:

- An 1819 large size Bust type "struck 15% off-center; obverse Good, reverse Fair" --- \$120.
- An 1899 Barber "with a semi-circular depression caused by another coin not having been ejected fully---about uncirculated" --- \$150.
- A 1919 Standing Liberty "20% off-center" in BU condition brought \$460.
- Another 1919 "struck on a planchet without a collar---resulting in a oversized coin with a plain edge, brilliant uncirculated". This rare piece sold for \$375.

The two half dollars included were:

- An 183(?) Bust type "struck 30% off-center, edge lettering complete. Fine condition" --- brought an impressive \$450.
- A 1918 Walking Liberty "struck 15% off-center, plain edge, brilliant uncirculated and very rare" was awarded to the winning bidder at \$550!

Common date coins in the following listings were computed on a basis of gold bullion at \$124.60 per ounce.

The more common date silver rolls were computed on a basis of silver bullion at \$4.28 per ounce.

CIRCULATED ROLLS

Earlier rolls average good, later rolls usually include higher grades

A study of the

UNITED STATES TWO-CENT PIECE

by Mike Kliman, guest columnist

The Two-Cent piece is one of the shortest-lived—and least collected—of all United States coins. It was a product of the Philadelphia mint in an era when a number of other denominations were making their debut and at a time when design changes were a common occurrence. The new “small cent” had been introduced in 1857, had been redesigned in 1859, again in 1860—with an alloy change in 1864. The Three-Cent piece of the new nickel alloy became a reality in 1865—at a time when the silver version of this denomination was being minted in only very limited almost “collector only” quantities. The first Five-Cent piece was produced in 1866 (with a design change in 1867) and, of course, the period beginning in 1853 and continuing through 1866 was noted for numerous changes in design for dimes, quarters, halves and dollars as well as the various gold denominations. No wonder that the Two-Cent piece was more or less “lost in the shuffle”!

The earliest appearance in concept of the Two-Cent was in 1836. At that time the first patterns were created at the demand of then Secretary of the Treasury Salmon P. Chase. Regular minting of this denomination began in 1864 and continued without interruption through 1873. Over the past ten years I have studied and catalogued the numerous varieties of each of the various years and the complete presentation of this and much other important information about the series is scheduled to be released in book form early in 1977. The following is a preview of this first extensive examination of the Two-Cent series.

An interesting fact about the Two-Cent series is that the earlier issues were coined from planchets produced from recalled and melted half-cents. The alloy composition rapidly underwent oxidation and full original red specimens are very scarce—the relatively few extant pieces having been mostly saved by collectors during the year of issue. It should be noted that fully struck MS-70 pieces are worth at least 60% more than the current levels for part red coins in the MS-65 range—with the later dates in this rare condition commanding even greater premiums.

The 1864 “small motto” variety is the third scarcest circulation strike issue in the series—after the 1865/4 and 1869/8 overdates. There are two die varieties known—one for the business strikes and the other having been used for proof production. (The last recorded sale of a proof was by private treaty only a few months ago. This sale is reported at \$12,000! Only seven to ten “small motto” proofs are known.) The business strike issue of this variety currently trades at around \$375-\$400 for MS-60 specimens to over \$900 for choice MS-65/70 pieces. The appearance today of a gem MS-70 “small motto” at a major auction would almost certainly set a new record.

It must be mentioned that early strikes from non-proof dies are occasionally offered as proofs. Distinguishing proofs from non-proofs is often quite a problem. In discussing the matter with fellow numismatist Walter Breen, the conclusion was reached that unless a particular die characteristic exists only in the proof die there will always be a question as to whether a coin is or is not a proof.

The two largest mintages in the series are 1864 “large motto” and 1865—thus far thirty die varieties have been catalogued for the 1864 and twenty-one for the 1865. It is almost certain that the interest created by the publication in 1977 of the in-depth examination of this series will result in even more varieties being discovered. Both 1864 “large motto” and 1865 specimens currently are worth from \$110-\$125 in MS-60 condition to as much as \$300-\$350 for full red pieces. It is these two dates which are most often available in the ultimate condition and, as a result, are usually the dates found in type sets. The 1864 “large motto” proof however, is the lowest mintage of the series of proofs with only one hundred or so pieces estimated. Prices, of course, depend upon the state of preservation; choice full red specimens are worth at least \$650—with toned but hairline-free pieces worth \$350-\$500 according to color. This, of course, is by far the scarcest proof in the series (except for the “small motto”) and, in the opinion of the author, is still under-priced in relation to its elusiveness. The 1865 proof is far more plentiful and falls more or less into the current \$375-\$415 range for nice MS-65 coins. Gems are still worth \$525 or more!

The 1865/4 overdate is the second rarest overdate of the series. The coin has been discussed for a number of years and is the result of a 5 having been cut over the 4 of a regular 1864 “large motto” die. Presently the price ranges from \$185 in MS-60 condition to \$850 or more for full MS-65/70 pieces. No overdate proofs were minted. It should be mentioned that one regular 1865 die had a recut 5 which is often mistaken for the overdate. Caution is advised when buying this coin.

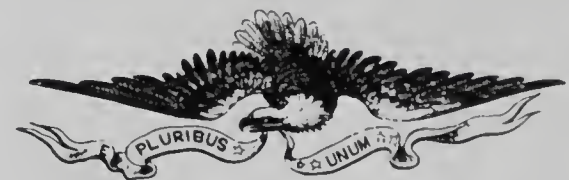

The 1866, 1867 and 1868 Two-Cent pieces had similar mintages of around two million each—a far cry from the respective nineteen and thirteen million mintage figures for the “large motto” 1864 and 1865 issues. At this point ten die varieties have been catalogued for both the 1866 and 1867 issues and sixteen for the 1868. The realistic price structure for these three relatively scarce mint state issues ranges from \$150-\$175 in MS-60 condition to over \$500 for fully struck full red specimens. Non-impaired proofs currently are worth \$300-\$600—again according to the state of preservation and to color.

A major variety which has escaped the notice of many collectors is the “double die” of 1867. Here a shifted hub is noted and both the motto and wreath are visibly doubled. This piece is considered to be valued between \$200-\$800 for mint state pieces. No proofs are known.

The 1869 issue is only slightly more scarce than the 1866-68 with a mintage of one and a half million. (Again, ten die varieties have been listed.) Prices for both business strikes and proofs are currently more or less in line with these earlier issues. The 1869/8 overdate, however, is the rarest issue of the entire series—no full red specimens have yet been seen by the author. This rare piece is now valued in the \$500 for MS-60 to \$1000 for part red pieces; a gem MS-70 specimen, if it exists, would create quite a stir at a major auction and the resulting sale price would probably be very impressive!

With the five known die varieties of 1870 and the seven catalogued varieties of 1871 we come to the beginning of true scarcity in the Two-Cent series. The current price levels range from \$200-\$225 for MS-60 pieces to at least \$500 for the seldom encountered full original red coins. Proofs, however, are priced in the same \$300-\$600 range as the earlier dates. This price range is for pieces without impairments such as noticeable hairlines nicks or scratches; the higher end of the price scale, of course, is for full red gem pieces while the lower end covers pieces with various amounts of original colors and natural toning.

(Continued on page two)

AUCTION TRENDS

Three major auction sales recently took place in Los Angeles during the short span of only eleven days—ten lengthy sessions with an average of six hundred to eight hundred lots each! Many of the major dealers in the country attended these auctions, bidding in competition with collectors and investors from the area as well as many who had “flown in” for the occasion. At least several of the potential buyers were hoping that the sheer volume of coins being offered would result in an abundance of bargains. But no such luck! Bidders were “on their toes” from the first session of the Abner Kreisberg “Quality Sales” auction which began November 8—thru three sessions of the Bowers and Ruddy Galleries auction (which was held in conjunction with the Greater Los Angeles Coin Convention) and thru the last session of the Superior Stamp and Coin Company auction on November 18. (Please note that the following prices realized are coded “K”, “B & R” and “S” to denote at which of the above auctions the particular coins were sold.)

Properly graded coins in all areas were bringing top prices—with particular emphasis, as usual, on “choice” and “gem” specimens. Interest in quality, if anything, is still on the increase! Defect-free early material in any grade was also enjoying very competitive bidding, along with “dated” coins from the three Barber series thru Buffalos, Mercuries, S.L. quarters and W.L. halves.

Take a look at the prices realized for a few common date coins which were offered at these recent auctions in truly “gem” condition:

1857 Flying Eagle cent - “Gem Brilliant Uncirculated; prooflike surfaces with square proof-style edges; needle sharp strike—an MS-70 coin”. This exceptional specimen brought \$950! (B & R)

1860 Copper-nickel cent - “Gem Brilliant Uncirculated; fully prooflike fields”. Another exceptional piece—which realized \$250! (B & R)

1893 Indian Head cent - “Gem Uncirculated; impossibly beautiful iridescent gold-green toning; needle sharp strike”. This common date coin in what is definitely not a common condition sold for what certainly must be a record-setting \$125! (B & R)

A STUDY OF THE UNITED STATES TWO-CENT PIECE (Continued from page one)

Perhaps the most noteworthy coin in the entire series is the issue of 1872. While not yet commanding the prices of its 1873 "big brother", the 1872 is undoubtedly the major "sleeper" of the series. So far only three varieties have been seen—all with the same obverse die. Most individuals are unable to distinguish proofs from uncirculated pieces due to the fact that the uncirculated 1872 is almost always coined from the proof die on a business strike planchet. Thus, while the piece may have many proof characteristics (sharpness of strike and squared sharp rims) the surface does not carry the full mirrorlike surface of a proof. Often proofs of this date will be offered for sale as "choice prooflike uncirculated" because of the rarity of full MS-65 or better uncirculated pieces. A specialist, however, can rapidly tell the difference. Again care is urged when buying this coin in uncirculated condition. Prices for truly uncirculated 1872's range from \$600 to well over \$1200; the proofs are worth \$450-\$800—both prices ranges, of course, depending upon quality. It is estimated, by the way, that no more than a few dozen true uncirculated 1872 Two-Cent pieces are extant!

The issue of 1873 is a "proof only" issue. The original coinings were made from the "closed 3" die and are a bit more scarce than the later restrikes which were from an "open 3" die. The values of these proofs range from \$750 to \$1250.

No mintage figures for proofs are given in the Guidebook except for 1873. The compilation of the number of proofs for the earlier years is at best an educated guess—based upon the number of sets recorded as struck for the various years and the totals for extras which would have been sold apart from sets. The following are the proof mintages as estimated by one of my associates, Maurice Rosen, who has thoroughly researched the Two-Cent series. (The total proof mintage is based upon a figure of 7,160+ for all years—with an approximate gross total of 8000.) Many of the unsold proofs as well as business strikes were melted with other obsolete minor coinage under the Act of March 3, 1871. In fact, as noted in "Fractional Money" by Neil Carothers, 1903, John Wiley & Sons, Inc., page 302—some fifteen million of the forty-five million six hundred thousand Two-Cent pieces were presumed to have been melted. These proof mintage figures are important to the collector who is attempting to assemble a complete set of Two-Cent proofs:

| | |
|--------------------------|---------|
| 1864 "small motto" | 7 to 10 |
| 1864 "large motto" | 100+ |
| 1865 | 500+ |
| 1866 | 725+ |
| 1867 | 625+ |
| 1868 | 600+ |
| 1869 | 600+ |
| 1870 | 1000+ |
| 1871 | 960+ |
| 1872 | 950+ |
| 1873 original (closed 3) | 600 |
| 1873 restrike (open 3) | 500 |

As to the survival of these proofs, one can only assume that it falls within a range of 40% to 70%—with the earlier dates at the lower end of this scale.

Worth noting among the many interesting facts about the Two-Cent series is that during government melting of Indian cents and Two-Cent pieces in late 1942 or 1943, the pieces destined for destruction were first put through roller dies which stamped the word "REJECTED" across the coin. The coins were then rekegged and sent to the brass mills in Tauton, Mass. for melting and subsequent production of brass sheet. Some of these coins escaped the melting furnaces and are extant today!

This short article has only covered some of the highlights of a very interesting coin. These and other pertinent facts regarding the largely overlooked Two-Cent series including a complete pricing guide will be contained in the previously mentioned book scheduled for release early in 1977!

AUCTION TRENDS (Continued from page one)

1867 Two-Cent piece - "Gem Uncirculated with traces of proof surface". Again a common date—the price realized was \$340! (K)
1917-P Buffalo nickel - "Gem Brilliant Uncirculated; full strike". This coin fetched \$60 against the current teletype bid of only \$33. (B & R)
1923-P Mercury dime - "Gem Brilliant Uncirculated; MS-70". Redbook on this coin is \$25—this superb specimen sold for \$95! (B & R)
1906-O Barber quarter - "Gem Uncirculated; virtually an MS-70 coin with superb surfaces and attractive toning". Recognized as only slightly better than a common date with a Redbook listing of \$260, this piece brought \$700! (K)
1925 Standing Liberty quarter - "MS-65 with a fully struck head; a gem!" This is perhaps the most common S.L. quarter with a full head—the winning bidder paid \$310 (the present teletype bid is \$230). (S)
1929-D Walking Liberty half dollar - "Gem Brilliant Uncirculated". While not a "common date", this is also not an especially tough coin to locate—however, in gem condition this particular specimen realized \$350! (B & R)
1926 Twenty-dollar St. Gaudens - "A gem MS-65+"—sold for \$370. This date is one of the most common dates which are regularly traded in "average unc" and "BU" condition. This coin, however, was one of the seldom encountered gems. (S)

These very impressive prices give an excellent indication of what "common dates" in an uncommon condition are bringing at major auctions. The above listed pieces are not simply "choice" coins—they are exceptional. It is obvious that when true quality is at stake, price becomes a secondary consideration to the buyer who wants "the very best"! The collector or collector/investor with a thorough knowledge of what to look for when selecting gem material—and, of course, time and patience, can locate coins of the same quality as those listed above for considerably lower prices. Bourse tables—especially at small shows—and smaller auctions are often sources of an occasional "gem" at a very reasonable price. Your local coin shops, too, can become a supplier to you of such material—particularly if you establish a working rapport with a dealer or two.

Another area which deserves particular mention is coins which are extremely elusive in choice to gem condition but which carry very nominal "Redbook" listings in relation to their true rarity in full mint state condition. A few examples of coins in this category which were included in these recent auctions are:

1863 Three-cent silver. This date was represented in two of the auctions in full mint state; this is a date which is rarely encountered in other than proof condition—and bidder competition was commensurate with this scarcity. One "MS-60" specimen realized \$475 (K) and the other, a full "choice MS-65" piece brought \$700! (S) The Redbook listing for this date is \$385. It should be mentioned that all of the 1863-72 Three-cent silver pieces in uncirculated condition are in great demand and that the 1865 and 1867 thru 1872 are particularly rare in other than proof.
1884 Three-cent nickel. This date currently catalogs at \$200—yet a piece described as "a gem specimen" sold for \$525! (B & R) Again, interest in exceptional examples of uncirculated low mintage three-cent nickel pieces (1879-89—with special emphasis on 1883 thru 1887) is still on the increase.
1844 Seated Liberty quarter. The "Redbook" carries this issue as a totally common date type coin, yet the "choice uncirculated MS-65, well struck" specimen recently auctioned brought an impressive \$1100! (K) Pre-1853 "no motto" quarters in top grade are seldom located and "double catalog" (or higher) are the rule rather than the exception!

Some examples of the prices that choice Barber material is bringing (descriptions are from the various auctions):

| | |
|--|-----------------------------|
| 1892-S dime - "Gem BU" | \$375 (B & R) Catalog \$200 |
| 1894-P dime - "Gem BU" | \$400 (B & R) Catalog \$135 |

Space does not permit examples of prices brought at these auctions by the later series. Suffice it to say that choice fully struck Buffalos, Mercuries, Standing Liberties and Walking Liberties were bringing prices in the "50% over to more than double" current catalog listings—with fierce competition for the "gems" (Quick examples: a "gem BU, full bands" 1916-D Mercury brought \$3400, a 1942/41 P carrying the same description sold for \$4500! (both B & R))

Common date coins in the following listings were computed on a basis of gold bullion at \$131.00 per ounce.

GOLD SERIES by date

Gem MS-65/70 specimens are worth more than the MS-65 prices listed below.
